1 GEOS Overview

GEOS is an EPD Portal to provide the one-stop interface to allow the regulated community to submit information to EPD, and also to support the general public to query environmental data of their interests.

(A) For EPD:

GEOS will serve as a central platform for the EPD to review submission, permit management, compliance monitoring, and agency performance monitoring. Currently GEOS supports these functions for the EPD Air Branch and Water Branch with the ability to add additional branches as needed. GEOS offers the agency users the following functionality:

- Review submissions and track status at every step of the work flow
- Approve or deny submissions
- Manage permit status and issue permits
- Create and accept paper submissions
- Manage inspections and results
- Provide performance metrics reporting tools
- Manage public and agency users

(B) For the Regulated Community:

GEOS will serve as a central platform for the facility to manage permit applications, permits, reporting requirements, and compliance reports. GEOS offers online options for a wide spectrum of submittals, including:

- Environmental Permitting
 - Apply new permits
 - Amend permits
 - Renew permits
- Environmental Reporting
 - Submit compliance reports
 - Submit monitoring data

The initial launch will offer air permit options regulated under the Clean Air Act Title V Operation permit program, and surface water permit options required under the Clean Water Act Georgia Pollution Elimination System. EPD will continue to enhance the GEOS and offer additional online submittal features in the future.

1.1 Definitions, Acronyms, and Abbreviations

This subsection provides the definitions of all terms, acronyms, and abbreviations required to properly interpret the System Design Document.

Table 1: Terminology

Term	Definition
GEOS	Georgia EPD Online System: Online submittal system for environmental data
GIS	Geographic Information System: Utility that allows for online mapping.
NPDES	National Pollutant Discharge Elimination System: Application for a permit to allow a POTW to discharge treated wastewater to the environment.
WLA	Waste Load Application: General information application submitted alongside the NPDES application.
Title V	Title V of 1990 Clean Air Act, the environmental law for the operation permits mandated under the 40CFR Part 70 regulations
XML	Extensible Mark-up Language

1.2 Prerequisites

In order to use the GEOS system, the user will need the following:

- Internet connection
- IE 7.0 or higher
- PDF file Viewer (for viewing PDF files only)
- iPad

2 Business Processes Overview

Having a clear understanding of the business process is necessary in order to utilize the administration controls properly. The administrator has the ability to customize several different processes that are used by the users. This section provides a high level system overview of entire application submission and management process which include:

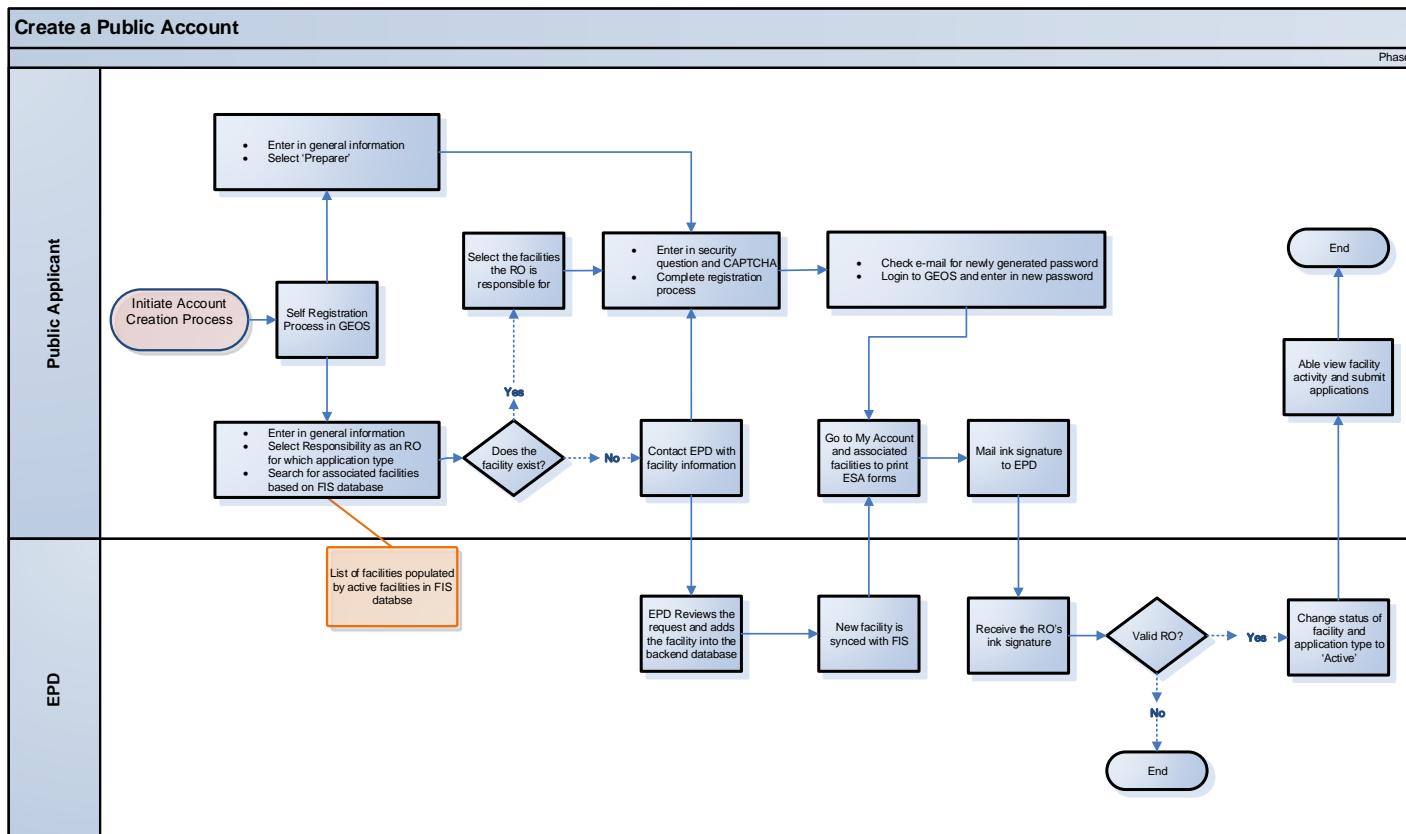

- Account creation
- Submission and permit management
- Inspection management

2.1 Accounts and Security Management

GEOS manages two types of users – agency users and public users. GEOS provides separate portals for each user to login to handle each user's responsibility. The public user are given the responsibility to submit permit applications while the agency users are responsible of reviewing the submissions in a timely fashion. This section details the various processes in creating and managing accounts in GEOS.

2.1.1 Public Account Creation

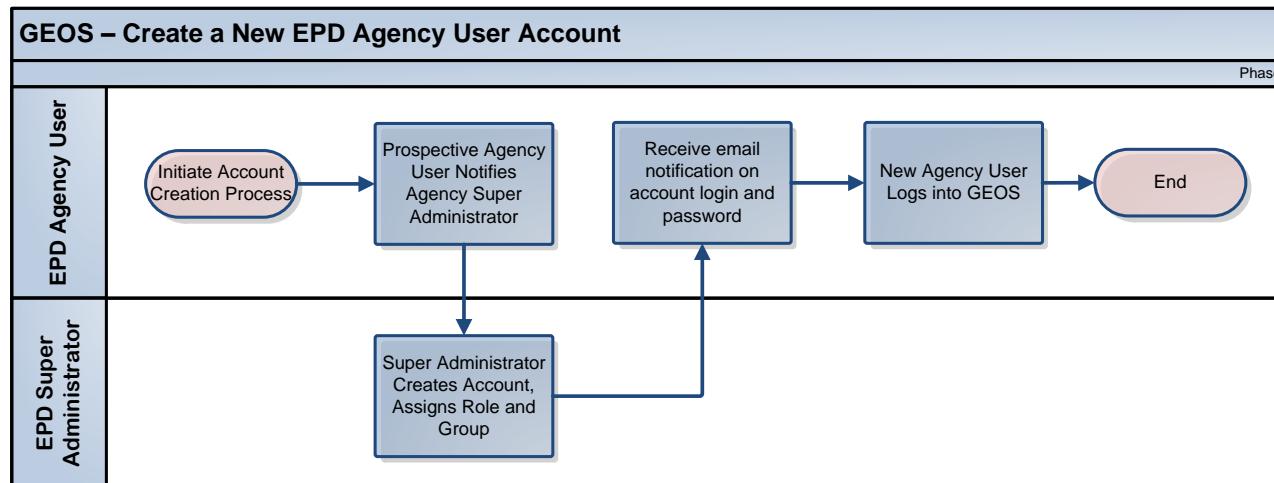

The diagram to the right outlines the steps necessary to create and activate an account.

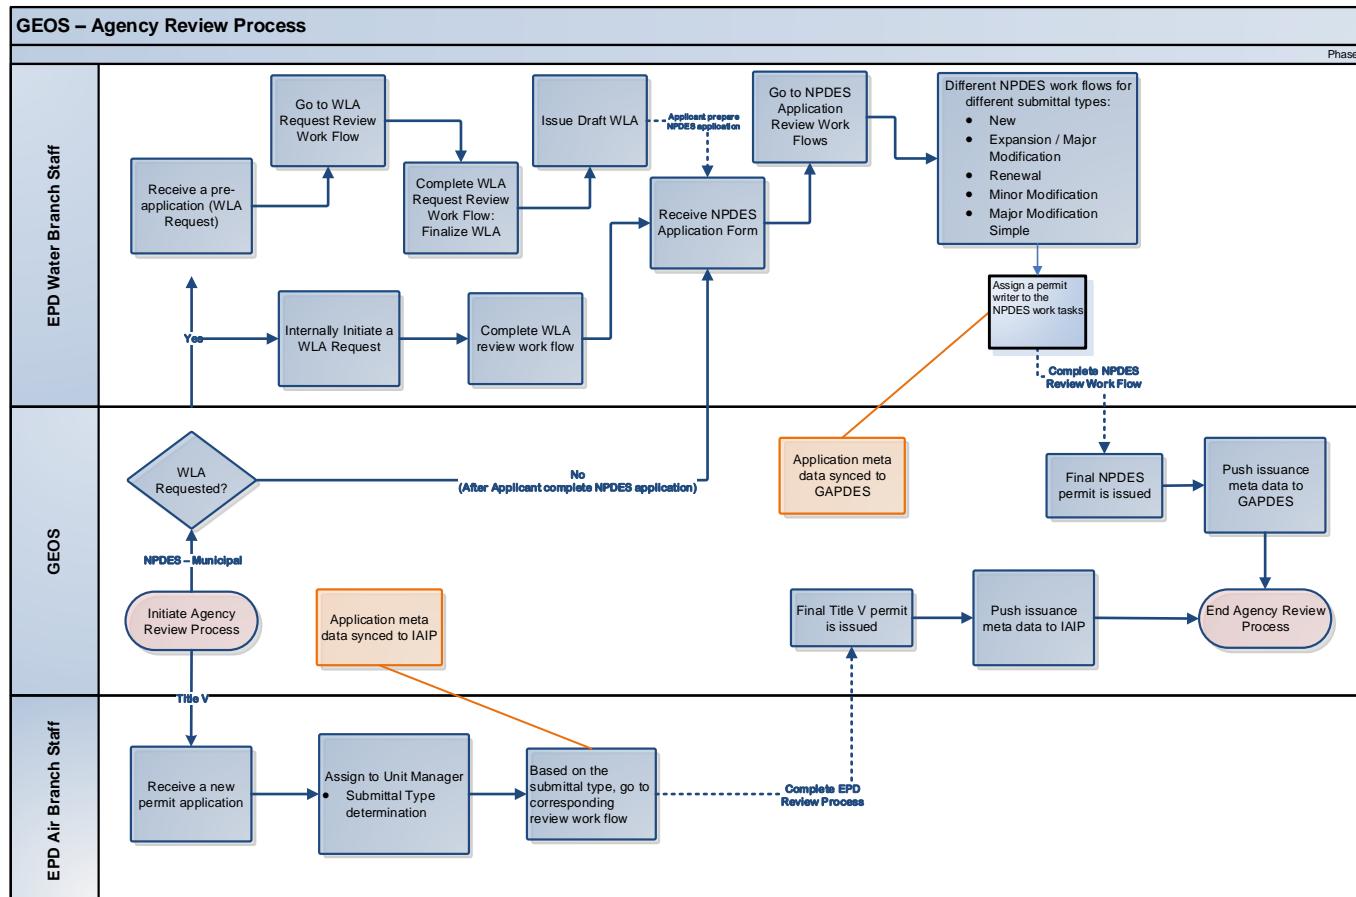

2.1.2 EPD to Create New User Accounts for EPD Staff

The diagram to the right provides a high level overview of how agency accounts are created.

2.2 Submission and Permit Management

Currently GEOS handles, WLA, NPDES, and Title V submissions. Since these submissions each have a different process, it is important to note how their workflows differ. The below diagram displays a high level description of how applications are processed utilizing the GEOS system for both the Air and Water Branch.

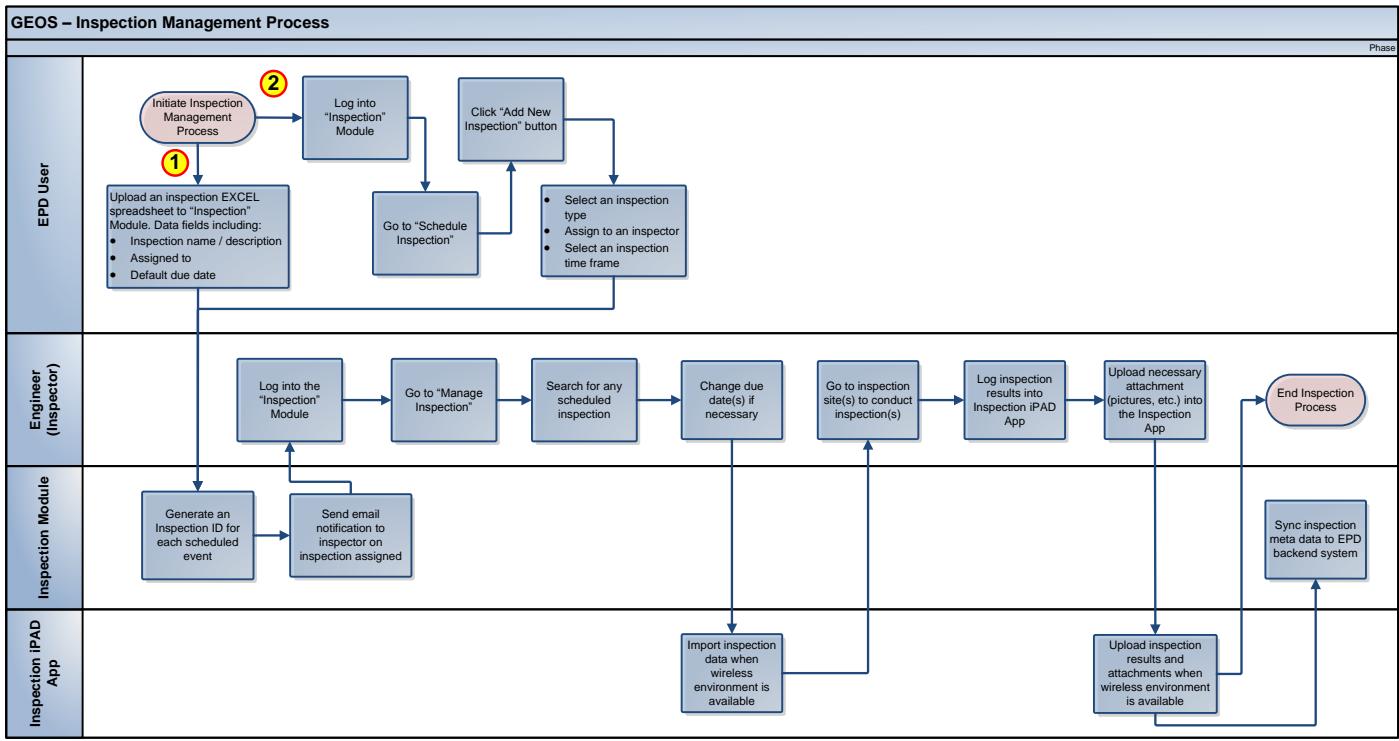

High Level Business Process for Application and Permit Management

2.3 Inspection Management

GEOS incorporates mobile technology in order to handle inspection. Inspectors can use the GEOS inspection application to sync the scheduled inspections and then records inspection results. The results can then be synced back into GEOS as long as the user can connect to the internet with the iPad. The below diagram outlines the work flow between the interaction of the inspector utilizing the iPad, GEOS, and the Inspection Manager.

3 System Overview

In addition to understanding the business process, it is important to understand the system design so that the administrator can have a clear understanding of how the system interoperates with GEOS users and other systems. This section will outline two specific topics:

- System actors and business groups
- Data flow between GEOS and other systems

3.1 Summary of System Actors & Business Groups

One of the key tasks for an administrator is to understand the role of each type of users. The table below lists the types of users and their responsibilities that will be utilizing the GEOS system. Please see section 6.1 for a hierarchy diagram of how GEOS groups are organized.

ID	Program	Actor	Goals, Motives, and Usage Patterns
1	Public	Responsible Official (RO)	<ul style="list-style-type: none">▪ Prepare and submit an application form▪ Apply, amend, renew, or withdraw NPDES or Title V permit▪ Manage permit applications and permit information▪ Manage User account and contact information▪ Use the system on a regular basis for data entry/query, correspondence, and tracking application review status
2	Public	Preparer (Prepare-only)	<ul style="list-style-type: none">▪ Prepare an application form▪ Use the system on a regular basis for data entry/query, correspondence, tracking application review status
Water Branch			
3	Administration	Branch Chief / Director / Admin	<ul style="list-style-type: none">▪ Sign on the final permit package▪ Uses the system on a regular basis for data query, reporting & to track performance metrics
4	WRP	Program Manager	<ul style="list-style-type: none">▪ Conduct technical review and decision on permit application▪ Submit draft permit package to EPA and applicant▪ Submit final permit package to Branch Chief / Director▪ Security level lower than Chief / Director / Admin, but higher than Unit Manager▪ Uses the system on a regular basis to review/query data, generate report & track performance metrics
5	WRP – Municipal Unit	Unit Manager	<ul style="list-style-type: none">▪ Conduct technical review on permit application▪ Submit draft permit package to WRP Program Manager▪ Security level lower than Program Manager, but higher than all the Staff within its Unit▪ Uses the system on a regular basis for document review and data entry
6	WRP – Municipal Unit	Permit Writer	<ul style="list-style-type: none">▪ Conduct technical review on permit application▪ Submit draft permit package to Unit Manager▪ Correspond with permit applicant▪ Keep track of Public Comment Period▪ Uses the system on a regular basis for document review, correspondence and data entry

ID	Program	Actor	Goals, Motives, and Usage Patterns
7	WRP – Industrial Unit	Unit Manager	<ul style="list-style-type: none">▪ Conduct technical review on permit application▪ Submit draft permit package to WRP Program Manager▪ Security level lower than Program Manager, but higher than all the Staff within its Unit▪ Uses the system on a regular basis for document review and data entry
8	WRP – Industrial Unit	Permit Writer	<ul style="list-style-type: none">▪ Conduct technical review on permit application▪ Submit draft permit package to Unit Manager▪ Correspond with permit applicant▪ Keep track of Public Comment Period▪ Uses the system on a regular basis for document review, correspondence and data entry
9	WPMP	Program Manager	<ul style="list-style-type: none">▪ Review, approve and sign off on the WLA memo and form
10	WPMP - Modeling Unit	Unit Manager	<ul style="list-style-type: none">▪ Assign WLA to Unit Staff to initiate permit application review▪ Review and finalize WLA memo and form▪ Uses the system on a regular basis for document review and data entry
11	WPMP - Modeling Unit	Unit Staff	<ul style="list-style-type: none">▪ Provide technical review on permit application to develop / modify a water quality model and to prepare WLA memo and form
Air Branch			
12	Administration	Branch Chief / Director / Admin	<ul style="list-style-type: none">▪ Conduct final management review▪ Issue final permit▪ Uses the system on a regular basis for data query, reporting & to track performance metrics
13	Permitting	Program Manager – SSPP	<ul style="list-style-type: none">▪ Conduct internal manager review and final management review▪ Security level lower than Chief / Director / Admin, but higher than Manager▪ Uses the system on a regular basis for data query, reporting & to track performance metrics
14	Permitting	Manager – SSPP	<ul style="list-style-type: none">▪ Assign engineer resource after a permit application is received▪ Conduct technical review on permit application▪ Security level lower than Program Manager, but higher than all the Staff within its Unit▪ Uses the system on a regular basis for document review and data entry
15	Permitting	Engineer	<ul style="list-style-type: none">▪ Conduct technical review on permit application▪ Issue draft permit▪ Facilitate Public Comment Period▪ Revise permit based on public comments▪ Uses the system on a regular basis for document review, correspondence and data entry
16	SSCP	Program Manager	<ul style="list-style-type: none">▪ Conduct technical review on permit application

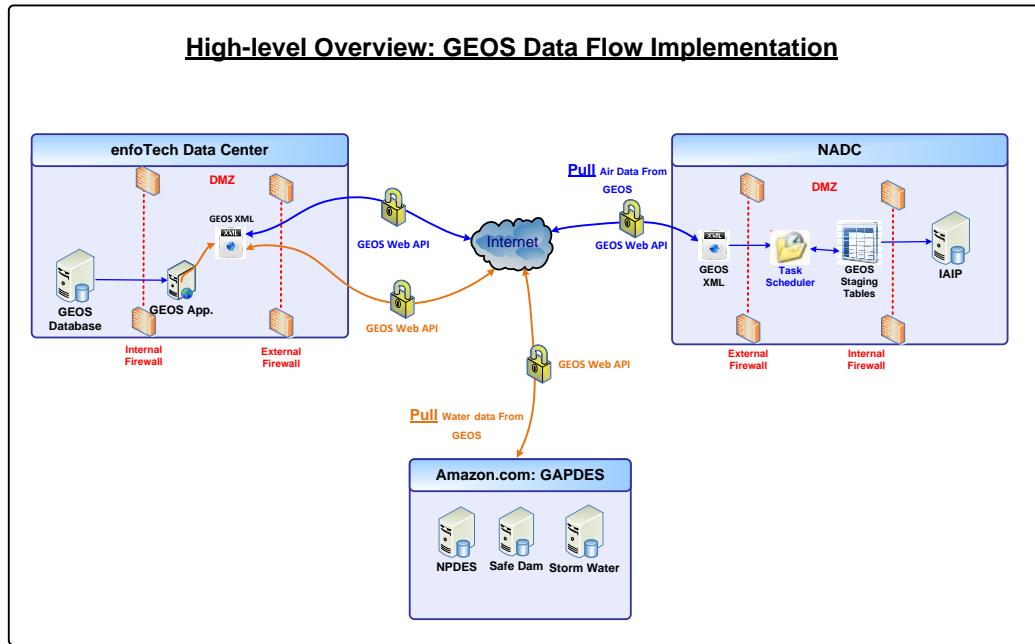

ID	Program	Actor	Goals, Motives, and Usage Patterns
			<ul style="list-style-type: none">▪ Uses the system on a regular basis for document review and data entry
17	SSCP	Manager	<ul style="list-style-type: none">▪ Conduct technical review on permit application▪ Uses the system on a regular basis for document review and data entry
18	SSCP	Engineer	<ul style="list-style-type: none">▪ Conduct technical review on permit application▪ Uses the system on a regular basis for document review and data entry
19	ISMP	Program Manager	<ul style="list-style-type: none">▪ Conduct technical review on permit application▪ Uses the system on a regular basis for document review and data entry
20	ISMP	Manager	<ul style="list-style-type: none">▪ Conduct technical review on permit application▪ Uses the system on a regular basis for document review and data entry
21	ISMP	Engineer	<ul style="list-style-type: none">▪ Conduct technical review on permit application▪ Uses the system on a regular basis for document review and data entry
22	MDU	Manager	<ul style="list-style-type: none">▪ Conduct technical review for modelling▪ Uses the system on a regular basis for document review and data entry
23	MDU	Engineer	<ul style="list-style-type: none">▪ Conduct technical review for modelling▪ Uses the system on a regular basis for document review and data entry

3.2 Overview of Data Flow between GEOS & Other Systems

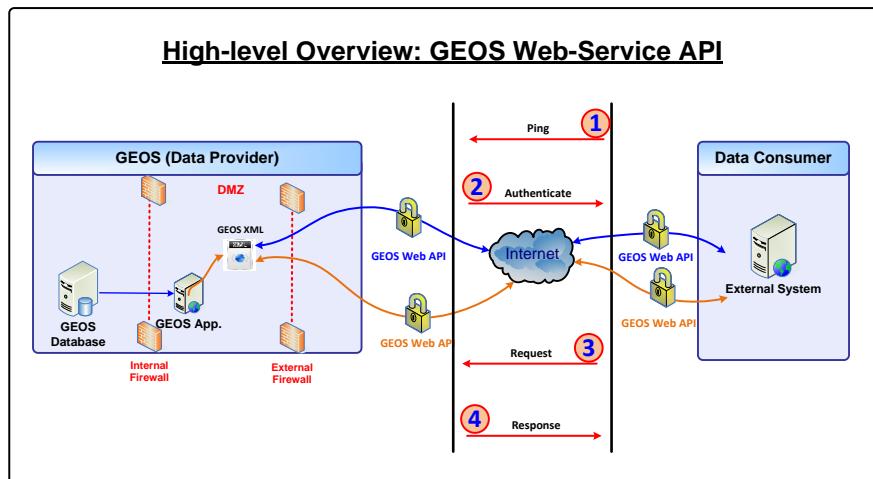

GEOS is an extremely flexible system that allows data to be called upon or retrieved by other systems through web services. This lets the administrator decide on who should be able to retrieve data and what type of data needs to be retrieved allowing GEOS to adjust dynamically based on new requirements. Currently GEOS has data flow between three different systems. The three different flows are:

- GEOS to IAIP
- GEOS to GAPDES
- GEOS to FIS

Below is a high-level overview diagram of the data flow between systems.

GEOS has incorporated web services to facilitate the transfer of data between systems. The GEOS Web-service API provides the ability for any external systems to request and receive GEOS data in XML format.

Currently GEOS has two types of web services. The first type of web services are called daily to update the data to the system that is calling the information regarding submission, withdrawals, work activities, inspection, and users. The second type of web services communicates between GEOS and FIS, where GEOS will pull information from FIS to populate facility data.

4 System Security Management

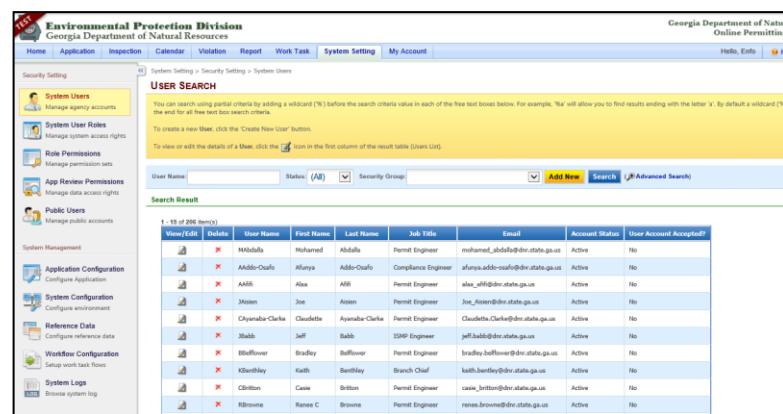

Configuring the security settings for users correctly will prevent unauthorized access and provide the correct visibility for the system users. The system administrator has several features to help them manage the security of their system. The system security management includes:

- Managing users
- Managing role and permissions
- Managing business group

4.1 Managing Users

Often times a user's account will need to be accessed to change certain information. The user account may need to be set to inactive to prevent the user from logging in to even resetting a password for a user. Users are managed in two separate groups – system users and public users. The system user interface manages the user on the agency side. From the 'System Setting' tab, the user can enter the 'System Users' module. From here, the administrator can view all the user accounts in the system. In the grid view, the user can delete user accounts by clicking the  icon.

View/Edit	Delete	User Name	First Name	Last Name	Job Title	Email	Account Status	User Account Accepted
		Mohamed	Abdalla		Permit Engineer	mohamed_abdalla@dnr.state.ga.us	Active	No
		Abdu-Osfa	Almyra	Abdu-Osfa	Compliance Engineer	almyra.abdu-osfa@dnr.state.ga.us	Active	No
		Ahli	Alex	Ahli	Permit Engineer	alex_ahli@dnr.state.ga.us	Active	No
		Assem	Joe	Assem	Permit Engineer	joe_assem@dnr.state.ga.us	Active	No
		Cayonab-Claire	Claudette	Aymanab-Claire	Permit Engineer	Claudette.Claire@dnr.state.ga.us	Active	No
		Halib	Jeff	Halib	ESHP Engineer	jeff.halib@dnr.state.ga.us	Active	No
		Bellflower	Bradley	Bellflower	Permit Engineer	bradley.bellflower@dnr.state.ga.us	Active	No
		Bentley	Keith	Bentley	Branch Chief	keith.bentley@dnr.state.ga.us	Active	No
		Clinton	Cassie	Clinton	Permit Engineer	cassie_clinton@dnr.state.ga.us	Active	No
		Browne	Renee C	Browne	Permit Engineer	reneebrowne@dnr.state.ga.us	Active	No

The administrator can use the search tool bar to filter out users. The administrator can either search by the username, status, or filter by the security group. If the administrator needs additional parameters to filter users, the administrator can use the 'Advanced Search' option. This gives them the ability to search users by first name, last name, e-mail, and if the user was accepted. By clicking on the  icon, the user detail will be displayed. From this menu, the user can edit the user's general information to their group and roles. The administrator can remove the user from any group they are currently associated with by clicking on the  icon. The opposite is true when the administrator clicks the 'Associate Groups' button. This will prompt a menu where the administrator can associate the user to multiple groups.

USER INFORMATION			
Detail information for the user.			
General Information			
* First Name: Mohamed	* Last Name: Abdalla		
* Employer: GA EPD	Job Title: Permit Engineer		
* Address Line 1: <input type="text"/>			
* Address Line 2: <input type="text"/>			
* City: <input type="text"/>	State: <input type="text"/> GA	* Zip: <input type="text"/>	Country: <input type="text"/> United States
Area Code: <input type="text"/>	Phone No.: <input type="text"/>	Extension: <input type="text"/>	
Mobile Area Code: <input type="text"/>	Mobile No.: <input type="text"/>	Mobile Provider: <input type="text"/>	<input type="text"/>
* Email: <input type="text"/> mohamed_abdalla@dnr.state.ga.us			
<input type="checkbox"/> Do you want to receive SMS messages through a mobile phone?			
<input type="checkbox"/> Do you want to save scheduled inspection to your Outlook Calendar?			

The administrator can also add new users by clicking on the 'Add New' icon. The administrator will be prompted to enter the user information

After all the general information has been filled, the administrator can choose a username for the user. The default status is set as 'Active' but the administrator can also set the status as 'Inactive'. If the status is set as 'Inactive', the user will not be able to use their account. The account settings has an additional indicator that states if the account is approved or not. This assists in the filtering of users that have not yet had their accounts approved. The user has to then be assigned a grouping. The group is an extremely important aspect in GEOS and will be explained in the later sections.

User Account Information			
* Username: <input type="text"/> Active	User Status: <input type="text"/> Active	Account Approval Status: <input type="text"/> No	<input type="text"/>
* Default Security Group: <input type="text"/>			
<input checked="" type="checkbox"/> Enforce user must change password at next login			
Note: <input type="text"/>			
Save User Info			

To finalize the account creation, the administrator has to click the 'Save User Info'. By saving the user, the account will be created and the group/role association menu will appear.

The groups will provide visibility for its members but without a role associated, the user will have no rights within the group. Please refer to section 6.1 to see the current grouping and role methodology used.

System Roles				
1 - 15 of 16 item(s)				
Groups	Role Name	Description	Groups	
<input type="checkbox"/>	GUEST	Guest Access to: Nothing (i.e. View only Access)	<input type="checkbox"/>	Water - WPMP Modeling Unit Manager
<input type="checkbox"/>	APPLICATION - Clerk	Application Clerk Access to: Paper Submissions and Application Admin Review	<input type="checkbox"/>	Water - WPMP Modeling Unit Manager
<input type="checkbox"/>	APPLICATION - Technical Assistant	Application Technical Assistant Access to: Application Technical Review, Inspection Scheduling	<input type="checkbox"/>	Water - WPMP Modeling Unit Manager
<input type="checkbox"/>	APPLICATION - Decision Maker	Application Official Access to: Application Decision (i.e. Issue/Deny), Inspection Scheduling, Inspection Decision (i.e. Pass/Fail)	<input type="checkbox"/>	Water - WPMP Modeling Unit Manager
<input type="checkbox"/>	APPLICATION - Inspection Manager	Inspection Manager Access to: Inspection Scheduling, Inspection Decision (i.e. Pass/Fail)	<input type="checkbox"/>	Water - WPMP Modeling Unit Manager
<input type="checkbox"/>	SYSTEM - ADMIN	TOP LEVEL permission. Access to: Everything!	<input type="checkbox"/>	Water - WPMP Modeling Unit Manager
<input type="checkbox"/>	SYSTEM - MANAGER	The system setting manager who can add, modify users. Access to: all System Settings	<input type="checkbox"/>	Water - WPMP Modeling Unit Manager
<input type="checkbox"/>	OTHER - Report & Query Tool	Other Access to: Report and Query Tool features	<input type="checkbox"/>	Water - WPMP Modeling Unit Manager
<input type="checkbox"/>	MANAGER	MANAGER	<input type="checkbox"/>	Water - WPMP Modeling Unit Manager
<input type="checkbox"/>	Branch Director	Branch Director	<input type="checkbox"/>	Water - WPMP Modeling Unit Manager
<input type="checkbox"/>	Program Manager	Program Manager	<input type="checkbox"/>	Water - WPMP Modeling Unit Manager
<input checked="" type="checkbox"/>	Unit Manager	Unit Manager	<input checked="" type="checkbox"/>	Water - WPMP Modeling Unit Manager

4.2 Manage Role & Permissions

Role settings will limit features accessible to the user assigned to a specific role. The 'System User Roles' gives the administrator the ability to change the role names and description. Additionally, the administrator can delete user roles in this section rather than having to go into every single user to remove their roles. The administrator can also associate users by clicking on the 'Associate User' button. By selecting the icon, new roles can be created.

SYSTEM ROLES

This Page allows you to Add/Remove "System Role" and associate "Tasks" for a selected System Role. To add a new System Role, click on the icon next to a System Role, click on the icon located on the right of the selected System Role. Click Save to save the changes to the system.

* Denotes a required field.

Roles	Role Details
APPLICATION - Clerk	
APPLICATION - Decision Maker	
APPLICATION - Inspection Manager	
APPLICATION - Technical Assistant	
Branch Director

	RWinne	Ross	Winne	N
	LBooth	Liz	Booth	N
	LHays	Lewis	Hays	N
	JHendricks	Jane	Hendricks	N

Associate User

The role permission set defines what each role has access to which is based on how the role permissions are configured in the 'Role Permissions'.

Role permissions play an intricate part in governing security. In this section, the administrator can create new role permissions if they decide a new role is needed with specific accessibility to system actions.

The user can delete specific controls by clicking on the icon. The 'Page' column provides a reference of where the particular control is located. Each control has its own name and process name to allow the administrator to differentiate the controls.

Permissions

Permissions	Task Info
Application Administrative Reviewer	
Application Decision Maker	Task Info * Task Name: <input type="text" value="Application Decision Maker"/> Description: <input type="text" value="Application final decison"/>
Application Paper Submitter

4.3 Manage Business Groups Setup

The administrator can effectively control user visibility in GEOS if the administrator has a systematic grouping methodology. The current grouping methodology can be viewed in section 6.1. In this menu, the current groups can be configured, deleted, and current configurations set.

By clicking the icon, new groups can be added. To add a sub-group, select the group the sub-group will be added to. In the example to the right, since 'Chemical Unit Engineer' was selected, the sub-group or 'Child Group' was connected to 'Chemical Unit Engineer'. By clicking on the icon, the selected group can be deleted.

The child group can now have users associated by clicking on the 'Associate Users' button. The Group Data Set will control the data the group will be able to view. In this scenario, the child group is under the Air Protection Branch main group which would mean that the users in this group should be able to see CAA related data. In that case, the CAA should be selected and the information saved by clicking the 'Save Group'.

The list of current data sets are:

- Inspection Category: Manages whether the group has access to water or air inspection records
- Form: Controls which application forms the group can access
- Report Type: Manages the type of reports the group can see
- Inspection Type: Manages the inspection type the group can access
- Application: Controls which application type the group has access to
- Query: Allows the user to query the database under reports
- Report Folder: Determines which reports the user has access to base on which folder the reports are in

5 System Configuration Management

The administrator is given complete control in how the system operates. It is possible that on occasions the system settings will need to be modified due to new requirements. The settings can be broken down to:

- Applications
- System environment
- Reference data
- Work flow
- System log

5.1 Configure Application Properties

The system allows for the administrator to modify the configurations of the applications available in GEOS so that items maybe added or modified based on new requirements. The administrator can configure application aspects that include:

- General information
- Types of documents needed to be uploaded
- Message templates
- Application properties
- Subsystem connection

The administrator can select which application type they want to modify.

App Name: Type: **(All)** Add New

Search Result

Edit	App Name	Type	Status	Department
	1004 - Title V Application	CAA	Active	Air Protection
	1003 - NPDES Municipal Application	Wastewater	Active	Watershed Protection

Once selected, the user can change the application name, code, and status. By setting the status as 'Inactive', the application can no longer be accessed. Further selections can be made such as which program the application should belong to, along with other categories.

General Package Setting Form Setting Message Template Notification Application Property SubSystem Item Group

This page allows you to configure general Application information displayed when your application is found using one of GEOS system search options. You can configure this needed! file. You can also modify the text displayed at the bottom of the Application Receipt for your application.

Basic Information

* App Name: <input type="text" value="Title V Application"/>	* Code: <input type="text" value="TVA"/>	* Status: <input checked="checked" type="checkbox"/>

In the package setting, the administrator can configure the attachment portion of the application, fee, inspection, issuance, and reviewer. The administrator can configure if an attachment is required, add additional attachment types, what types of files can be uploaded, and set its requirements. If the submittal includes multiple forms, the attachment can be configured from the 'Form Setting' section.

Under the 'Issuance' tab, the administrator can set trigger conditions and set restrictions.

The 'Form Setting' tab allows the administrator to control individual sections of the application. The user can add additional sections or delete sections. The user can also set if the section is optional, not applicable, etc.

The administrator can access the 'Message Template' tab in this section to customize their message templates. The administrator can set the templates as 'Active' or 'Inactive', change the format, and insert 'Tags' such as %first_name%, which will let the system replace the %first_name% with the user's first name.

The notification tab contains information that will be used to display notifications.

One of the more commonly used tabs is the ‘Application Property’. In this section, the user can disable disclaimers, change options from required to optional, or even just remove features such as application withdrawal.

5.2 Configure System Environment

The system allows for the administrator to modify the configurations of the system environment available in GEOS so that items maybe added or modified based on new requirements. The aspects that the administration can control are:

- Report server
- Email server
- Email templates
- Task frequency
- Security questions
- Document types accepted in GEOS
- Web service
- GEOS time

The system environment effects items that contain external controls. The first tab associates the location of the ‘Report Server’ with GEOS. If the link is broken, the reporting tools cannot be used.

Report Server	Email Server	Email Template	Task	Security Question	Document Type	Web Services	Atomic Time
This Page allows you to configure a Report Server Information, click “Save” to save the information to the database.							
Report Server Setting							
Server:	<input type="text" value="http://192.168.168.80:81/ReportServer"/>						
User ID:	<input type="text" value="GovOnline_Report"/>						
Password:	<input type="password"/>						
Domain:	<input type="text" value="192.168.168.80"/>						
Save Report Server							

Similarly, if the e-mail server links are broken, e-mails will not be generated by GEOS. If the administrator needs to change e-mail servers, the configuration can be done in the 'Email Server' tab.

The screenshot shows the 'Email Server' configuration page. It lists three hosts: Host 1 (mail.govonline.us.com), Host 2 (mail.enfotech.com), and Host 3 (mail2.govonlineSaaS.com). Each host is configured with port 25, user ID 'Govonline', and password 'Govonline'. The status for all three hosts is set to 'Active'.

System generated e-mails are all based on templates. The templates can be easily altered in the 'Email Template' tab. The tab itself provides a drop down with the template description so the administrator can find which template they would like to alter.

The screenshot shows the 'Email Template' configuration page for the template '(Application) - Subcode Review Result Notification'. It includes fields for 'From' (DoNotReply@GEOS.us), 'To List', 'CC List', and 'BCC List'. The 'Template Configuration' section shows the template status as 'Active', format as 'Text', and template tag as 'Insert'. The 'Caption' is '(Application) - Subcode Review Result Notification', 'Subject' is 'Notification of Subcode Review result for your Permit application', and 'Email Content' includes a message to the applicant/owner about the subcode review result.

The 'Task' tab lets the administrator set the schedule for when certain actions should be performed and how often they should be performed. For example, the user can set 'Notification Reminder' to daily and it will run once a day at the scheduled time.

The screenshot shows the 'Task' configuration page for the task 'Create Tasks'. It includes a 'Task Status' section with 'Enable Task' checked and 'Run Exclusively' unchecked. The 'Running Schedule' section shows the task starts at 4/27/2010 2:00:00 (hh:mm) and runs daily at 1 minute(s) (0 < minutes <= 1439) every day (1 <= days <= 365). The 'Save' and 'Get Server Time' buttons are at the bottom.

From this section, the administrator also can modify the security questions.

By clicking on the button, the user can change the question and set the grouping of the questions.

The screenshot shows the 'Security Question' configuration page for the 'Excel' attachment type. It includes a 'Document Type Details' section with 'Type Code' (Excel), 'Type Name' (Excel), 'Status' (Active), and 'Max Size' (0 kb). The 'Description' is 'Excel Attachment'. The 'File Type List' shows two items: *.ods and *.xls, both with status A and mime type Text/Plain. The 'Save' and 'Add New File Type' buttons are at the bottom.

In certain cases the user might want to modify the types of files that can be attached in the system. The administrator can define which extensions that the system will accept as attachments in the 'Document Type' tab.

Additional web services can also be added or deleted as more of GEOS begins to utilize or terminate services.

The administrator can modify the atomic time of the system by configuring where the time is being retrieved from.

Report Server	Email Server	Email Template	Task	Security Question	Document Type	Web Services	Atomic Time

	13	A	207.200.81.113	nist1.oil-ca.trueitime.com	13	1000	

5.3 Maintain & Update Reference Data

Maintaining proper data is extremely important with any database, so GEOS allows the administrator to update commonly used tables through this module. This module breaks down and groups similar tables together. The user can select a table and add new or edit existing data.

System Setting > System Management > Reference Data							
Generic Data	Dept.	Agency	Fee	Insp. Cat.	Insp. Type	Event Cat.	Request Cat.
To configure generic data, please select a generic table from dropdown list.							
Generic Reference Table List: GES.REF_APPLICABLE_RULE <input type="button" value="Load"/> <input type="button" value="Add New"/>							
Data of GES.REF_APPLICABLE_RULE							
View/Edit	Code	Name	Description		Status CD	Updated Date	Updated By
	.02(12)	SIP	Clean Air Interstate Rule NOx		Inactive	2014-07-23	admin
	.02(2)(3)	SIP	Sampling		Inactive	2014-07-23	admin
	.02(2)(5)	SIP	Open Burning		Inactive		
	.02(2)(aa)	SIP	VOC Emissions from Wire Coating		Inactive		
	.02(2)(aaa)	SIP	Consumer and Commercial Products		Inactive		
	.02(2)(b)	SIP	Visible Emissions		Inactive		
	.02(2)(bb)	SIP	Petroleum Liquid Storage		Inactive		
	.02(2)(bbb)	SIP	Gasoline Marketing		Inactive		
	.02(2)(c)	SIP	Incinerators		Inactive

	.02(2)(ccc)	SIP	VOC Emissions from Bulk Mixing Tanks		Inactive		
	.02(2)(d)	SIP	Fuel-burning Equipment		Inactive		

5.4 Manage Work Flow Setup

Workflows can sometimes change and when this occurs the administrator can enter the 'Work Flow Configuration' module to modify the current work flows. The work flow main menu can allow the user to turn a work flow to inactive and allows the administrator to group certain work flows together. By clicking on the icon, the user can add new

System Setting > System Management > Workflow Configuration																			
Process Name: Amendment NPDES Application Received <input type="button" value="Load"/> <input type="button" value="New Process"/>																			
Process Information <input type="button" value="Process Task"/>																			
WORK TRIGGER TEMPLATE																			
To Search / Manage Work Task Template																			
Basic Information																			
Process Name:	Amendment NPDES App	Process Description:	Amendment NPDES Application Received	Status:	Active	<input type="button" value=""/>													
Trigger Information																			
Trigger Type:	Conditional	Execution Type:	Executed Now																
Schema:	PermitDataTransform	Entity:	Submission																
<table border="1"><thead><tr><th>Property Name</th><th>Value From</th><th>Value To</th></tr></thead><tbody><tr><td>NPDESRequired</td><td>Y</td><td>Y</td></tr><tr><td>SubStatusId</td><td>3</td><td>5</td></tr><tr><td>ApplicationRid</td><td>1003</td><td>1003</td></tr></tbody></table>								Property Name	Value From	Value To	NPDESRequired	Y	Y	SubStatusId	3	5	ApplicationRid	1003	1003
Property Name	Value From	Value To																	
NPDESRequired	Y	Y																	
SubStatusId	3	5																	
ApplicationRid	1003	1003																	

fields in the grid. By clicking on the , the administrator can remove certain conditions from the grid.

Task Group List:	Task Group Detail																
 Group 1	<p>Task Group</p> <p>* Group Name: <input type="text" value="Group 1"/> * Execute Type: <input checked="" type="checkbox" value="Sequential"/></p> <p>Tasks</p> <p>Task List: <input type="text" value="ALL"/></p> <table border="1"><thead><tr><th>Duration</th><th>Assignment</th><th>Activity List</th><th>Task Record Value</th></tr></thead><tbody><tr><td></td><td></td><td>Activity Name</td><td>Activity Type</td></tr><tr><td></td><td></td><td></td><td>Column Name</td></tr><tr><td></td><td></td><td></td><td>Default Value</td></tr></tbody></table>	Duration	Assignment	Activity List	Task Record Value			Activity Name	Activity Type				Column Name				Default Value
Duration	Assignment	Activity List	Task Record Value														
		Activity Name	Activity Type														
			Column Name														
			Default Value														

Through the ‘Process’ tab, the user can see the task group list. New workflows can be inserted here if a new task needs to be added to the grouping. The groups can be set as sequential or parallel. If the execute type runs parallel, all work tasks will trigger at the same time. If the administrator wants to create a completely new workflow, then they can click on the ‘New Process’ button to begin a new workflow configuration.

The user can add plugins and remove plugins to activate certain functions. To view more detail on how a current object operates, the user can click on the  icon to view which object the work task is utilizing.

Activity Detail		
Activity Name:		Type:
<input type="text" value="Submission Association"/>		<input type="text" value="objectAssociation"/>
DII:		Class:
	Parameter Name	Parameter Value
	ObjectType	<input type="text" value="EnSuite.Core.Biz.PermitSubmission"/>
<input type="button" value="Ok"/> <input type="button" value="Cancel"/>		

5.5 Keep Track of System Logs

The administrator can view the system’s log through the ‘System Log’ menu. The user can filter out the type of logs by using the search tool bar above the search result. The administrator can also filter by the message and date range to search for certain occurrences. Since system logs can become lengthy and overwhelming, the administrator has been giving a purge option to clear all system logs.

By clicking on the , the administrator can view the detail of what occurred in the system at what date and time.

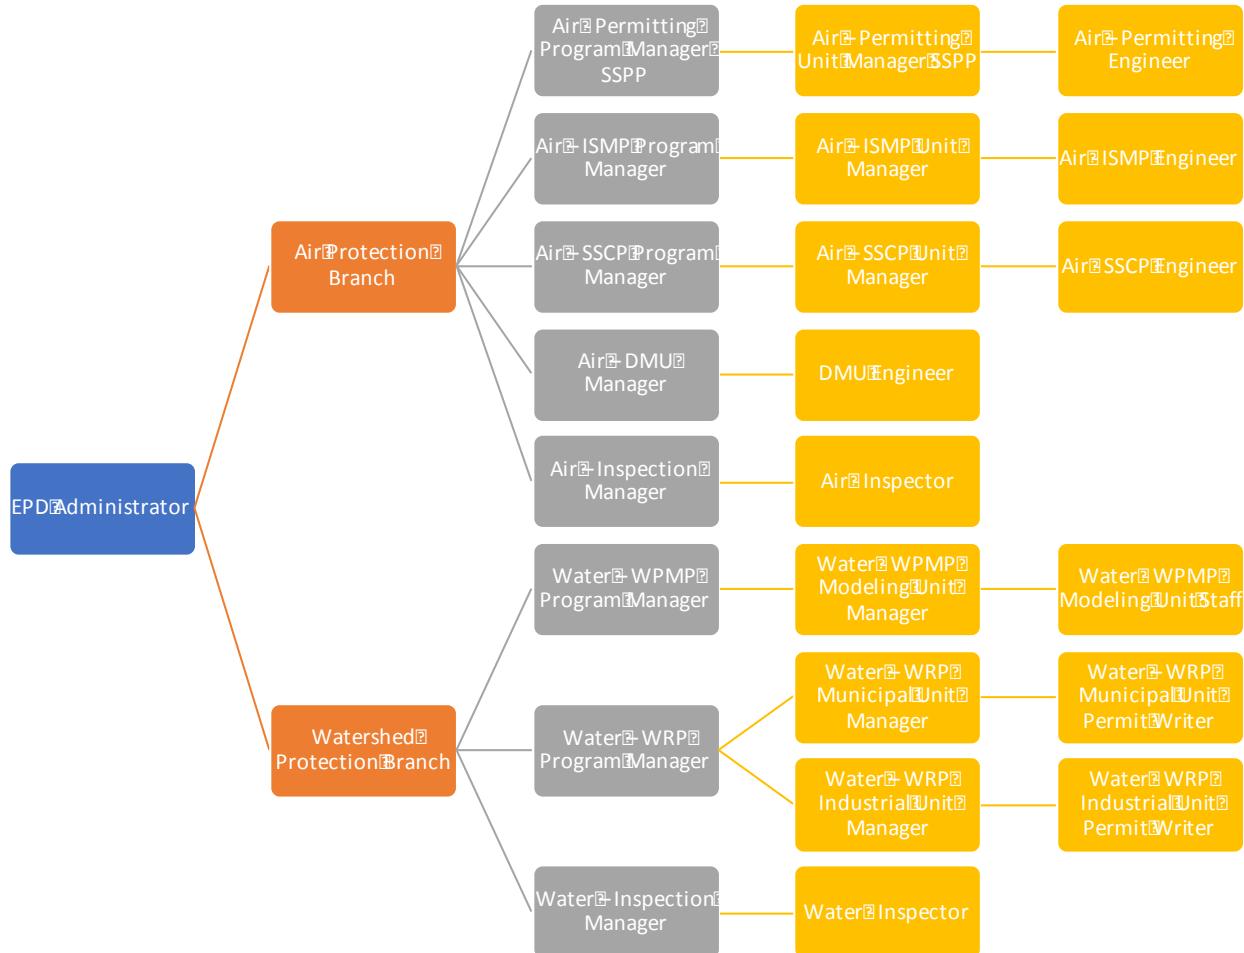

This Page allows you to use search panel to search for system log information.

6.2 Permit Status Descriptions

GEOS Permit Status	Permit Status Description
Issued	Permit has been issued.
Expired	Permit has expired; this occurs when the applicant fails to renew the permit before the permit expiration date; no further action can be performed against the submission.
Termination	Permit has terminated and is no longer valid.

Extension	The permit was given an extension and given a new expiration date.
-----------	--

6.3 Application Status Descriptions

GEOS Application Status	Application Status Description
Scheduled	The application has a task has been scheduled and the work task has not been completed.
Admin Review Start	The application is ready for the agency to start the review process.
Terminated	The application was requested and approved for termination. The application can no longer be altered and all work flow halted.
Revised Archived	The application was requested and approved for revision. The application can no longer be altered and all work flow is halted. A new application was created with the data from the revised application.
Permit Issued	The permit has been issued to the applicant.
Admin Review Completed	All attachments have been submitted, fee has been paid in full, and application form is complete; Submission ID remains the same when status is updated.
Public Comment Period Open	The application is in the public notice stage and is awaiting for a public announcement date.
Public Comment Period Closed	The public notice stage is complete.
Pre- Application Review Complete	The application has had all work activities completed for the pre-application.
Submitted - All Components Included	System automatically updates submission to this status when user submits an application if all attachments have been submitted and fee has been paid in full; application form is yet to be reviewed by agency staff.
Submitted - Some Components Missing	System automatically updates submission to this status when user submits an application and a pre-application was not needed.
Approved	Application has been approved and permit can be issued to the user/facility.
Withdraw	Application has been withdrawn by the Applicant; Submission ID remains the same when status is updated, but submission is closed and no further work can be performed on the submission.
Denied	Permit has been denied due to various reasons; Submission ID remains the same when status is updated.
Closed	All materials have not been submitted for agency user to issue a permit; application was previously in Incomplete status for a significant amount of time (manual determination by agency user); Submission ID remains the same when status is updated.
GEOS Application Status	Application Status Description
On Hold	Application is placed on hold due to various reasons (applicant cannot be reached, site cannot be accessed, etc.); time clock to process a submission stops and is resumed once application is taken off this status to another status (i.e. technical review complete).

GEOS Application Status	Application Status Description
Rejected	Application has been rejected for a permit (either because permit is not needed or work has already been completed); with this status, application has reached a terminal status and no further work can be performed against the same submission record; Submission ID remains the same when status is updated as such; applicant/agency user must make a new submission to request for a permit.

6.4 Inspection Status Descriptions

Status	Description
Cancelled	Inspection has been cancelled and does not need to be conducted anymore.
Completed	The inspection has been completed
Not in Compliance	Compliance Inspection completed and site inspection results are in violation of provisions associated to permit
Not Ready	Application has not been Accepted for GEOS to schedule inspection records
Compliant	Compliance Inspection completed and Site inspection results are in compliance of provisions associated to permit
Requested	Applicant has requested an inspection for an available date and time
Request Ready	Application is ready for applicant to schedule based on available inspection dates and times
Scheduled	Inspector has accepted to conduct inspection on a specified date and time
